FP - 95 Centrifuge

The FP-95 is a user-friendly batch centrifuge system capable of processing up to 1,950 pounds of product per hour. With its self-balancing design, no special foundation is needed. It's an ideal solution for dewatering tasks, whether you're handling leafy greens or root vegetables. The system features a pneumatically assisted lid opener that enhances productivity by ensuring safe and simple operation. The lid closes to start the cycle automatically, unlocks when the cycle is complete, and remains securely locked during operation. For convenience, the remote control panel can be installed away from wet areas, positioned wherever best suits your workflow. The FP-95 also offers adjustable speed control, allowing you to achieve the precise dryness required for different products. The digital timer is easily adjustable and located on the remote panel, while a clear tachometer on the machine enables quick quality checks.
